Delta Biometrics launches across all 50 domestic Delta Sky Clubs with check-in option
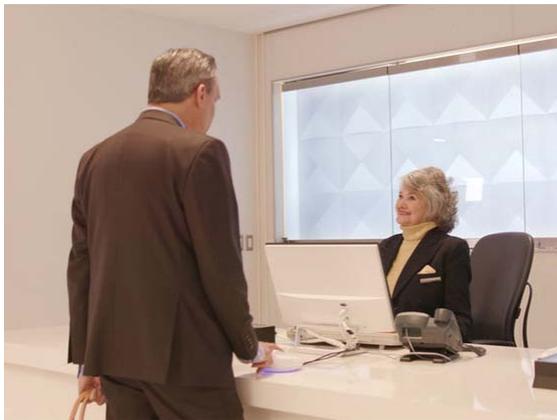

Delta Sky Club members with CLEARÂ® can use their fingerprints to enter all 50 U.S. Delta Sky Club locations beginning this week, making Delta the only U.S.-based global airline to offer customers a secure biometric check-in option at a single touch point across its domestic network.

Unpacking travellers' frequently asked questions about flying with luggage

Why are overhead bins so small? Why do ramp workers toss your bags around? Why do Transportation Security Administration agents rifle through your belongings even though they have high-tech scanners? In an industry that doesn't always use logic to make decisions, luggage may make the most sense.

DART- World's Smallest Laptop Charger

Laptop manufacturers have focused on creating devices that are feather light and paper thin. They've even removed ports that used to seem essential in order to save space. But all those advancements seem redundant when you still have to pack a bulky and clumsy charger into your already stuffed carry-on.

The DART by FINsix is the world's smallest laptop charger. It is up to 4X smaller and 6x lighter than the average 65W laptop charger. With 100-240V support, the DART can be used anywhere in the world and is compatible with most laptops, including Mac (Dart-C model). If you miss charging your phone from your laptop, the 6-foot-long cord also includes a USB port.

The streamlined design fits in tight spaces for

when the only available socket is hard to reach, or you're almost out of room in your bag. The small size of the DART won't compromise your laptop either; it includes overvoltage, overcurrent, and overheating protection.
